Analytics Token

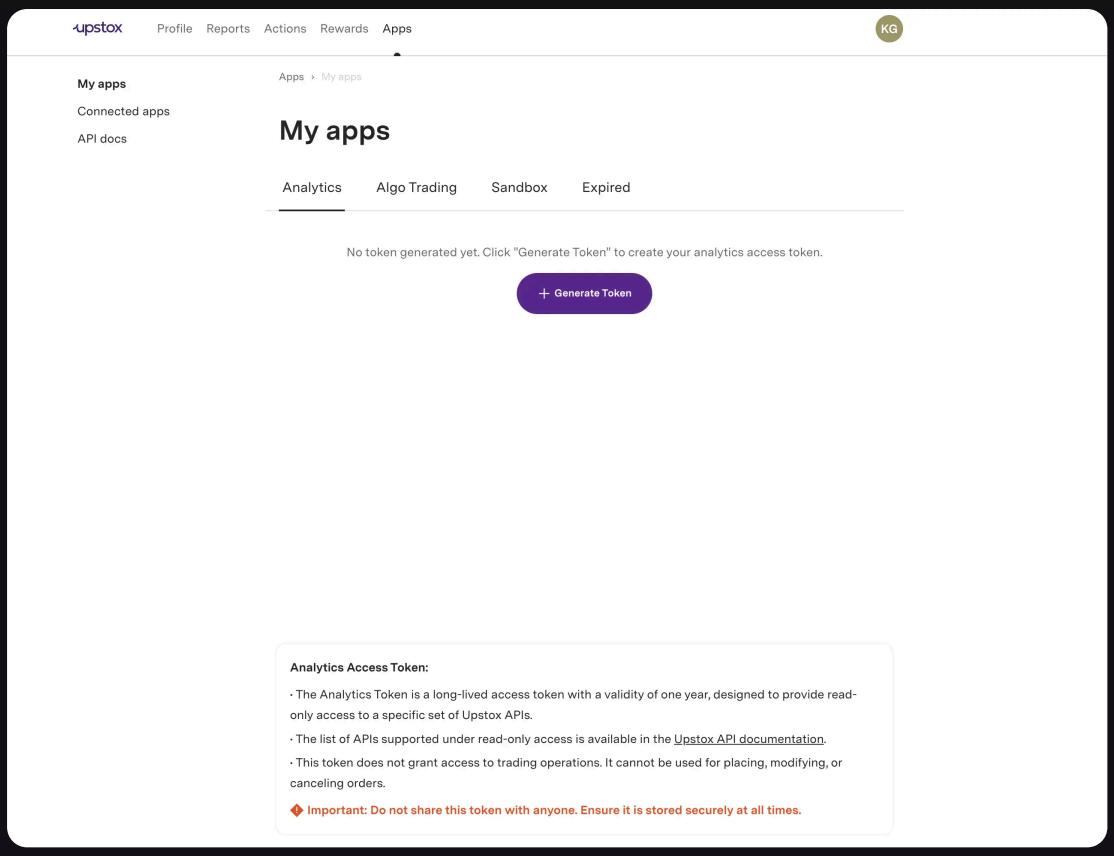
The Analytics Token is a long-lived access token (1-year validity) that provides read-only access to a defined set of Upstox APIs. Unlike the standard OAuth token flow, no authorization redirect is required — you generate it directly from the Developer Apps page. Because it is strictly read-only, the Analytics Token cannot be used for order placement, order modification, or any other trading operations.

Token Limitations and Restrictions

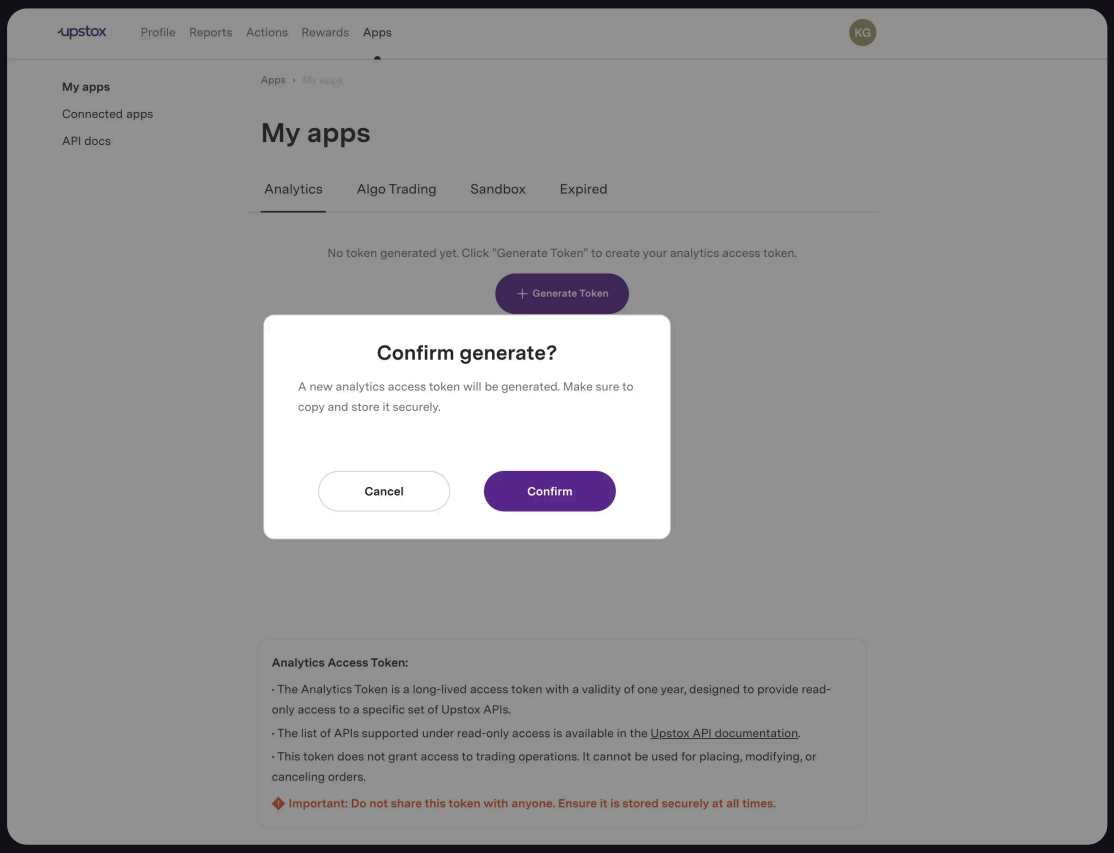
- The Analytics Token does not support trading operations or account data access. Actions such as placing or modifying orders, and retrieving positions, holdings, funds, profile, or trade details are not permitted with this token
- Each token has an expiry period of **1 year** from the date of generation.
- Only **one Analytics Token** is permitted per account at a time.
- **Do not share this token with anyone.** Treat it as a sensitive credential and store it in a secure location.

Generate an Analytics Token

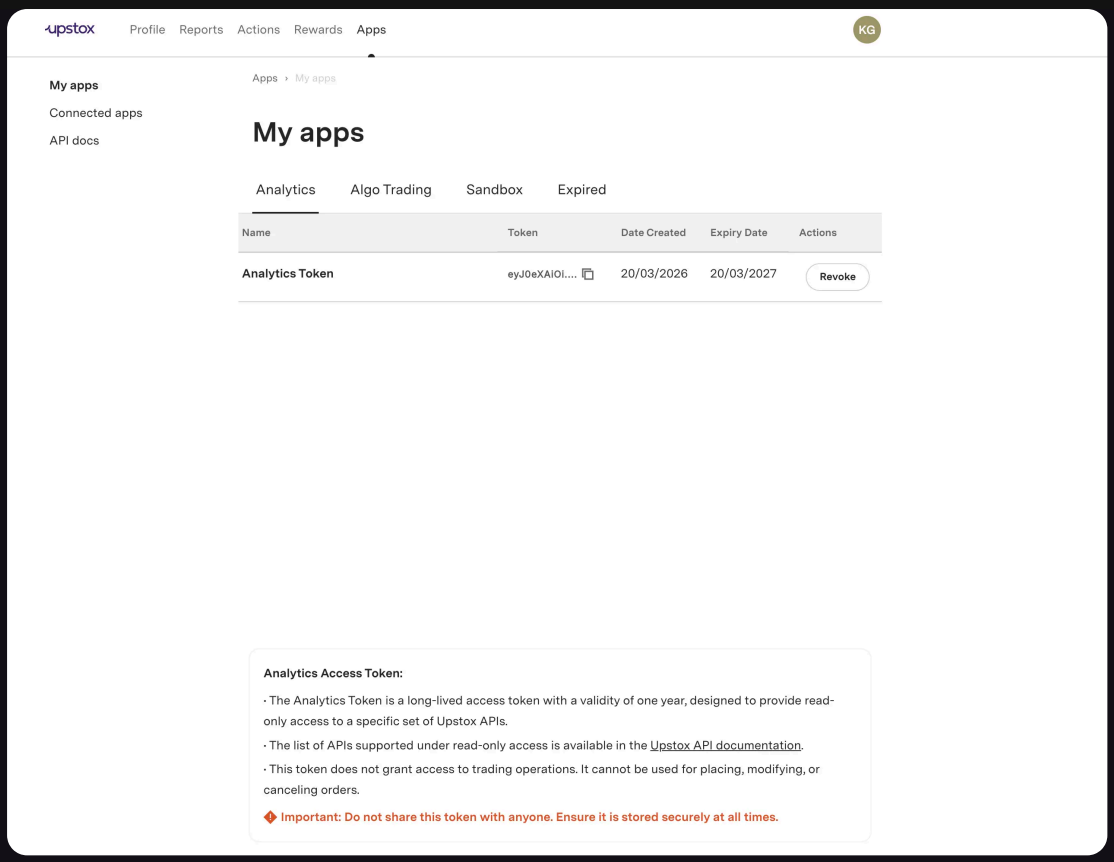
1. **Visit the Developer Apps page** — Go to the Upstox Developer Apps page and navigate to the **Analytics** tab.



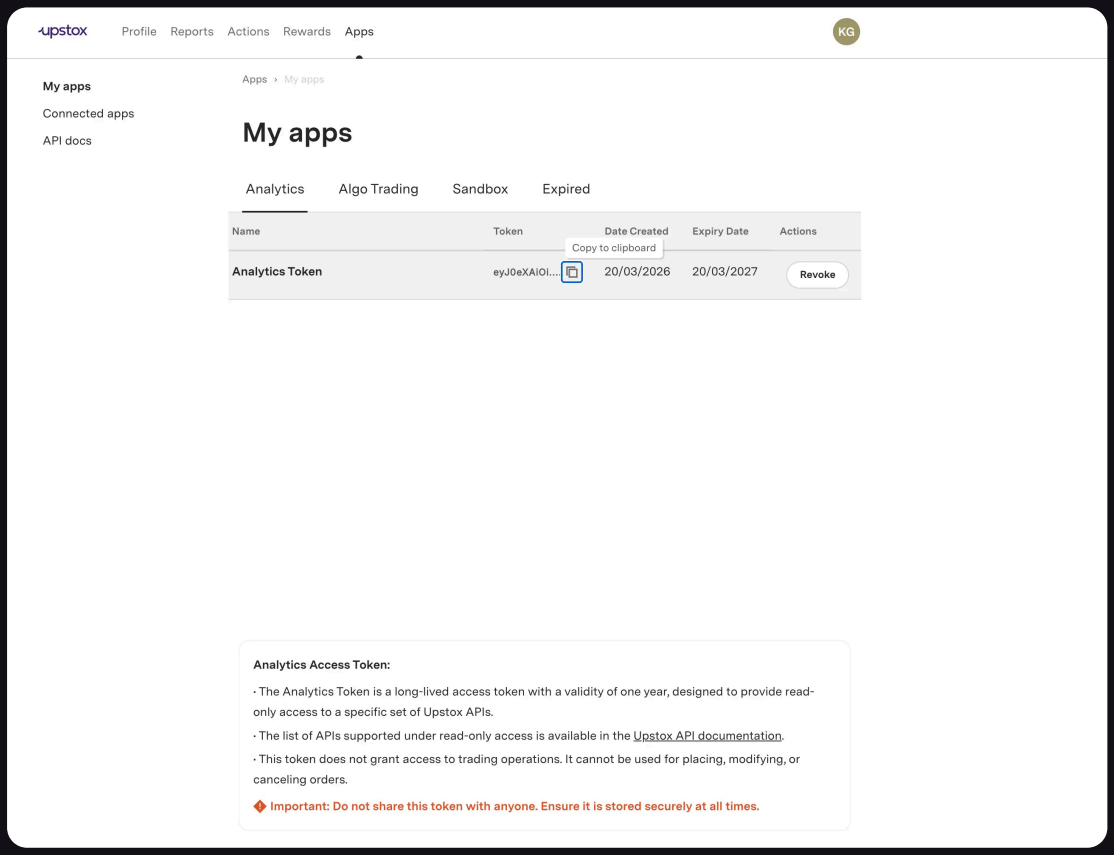
2. **Click Generate Token** — Click the **Generate Token** button. A confirmation dialog will appear asking you to verify the action.



3. **Confirm the generation** — Click **Confirm**. The token is generated and displayed along with its Name, Token (truncated), Date Created, Expiry Date, and a Revoke button.



4. **Copy the full token** — Click the copy icon next to the truncated token to copy the full token value to your clipboard.



Supported APIs

The Analytics Token grants read-only access to the following APIs:

API	Link
